

H0: GPQA B128 layer 13; BF16 phase-fluid analytical estimate

H3: GPQA B128 layer 13; BF16 phase-fluid analytical estimate

H2: GPQA B128 layer 13; BF16 phase-fluid analytical estimate

Proxy = current per-core HBM service rate $\times$ 65 ns; not outstanding-request occupancy.
 single_fetcher means exactly one positive supply stream, not one core with in-flight requests.
 GB/s uses decimal bytes; KiB uses 1024 bytes. 256 GB/s is the shared analytical service cap.
